PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years of professional experience designing and shipping production web applications across e-commerce, edtech, legal tech, and logistics. Strong on both sides of the stack - building intuitive React/TypeScript frontends and scalable Node.js, NestJS, and Django backends backed by PostgreSQL. Track record of leading frontend architecture, designing reusable component libraries, mentoring engineers, and delivering containerized, CI/CD-driven systems for distributed remote teams. Comfortable owning features end-to-end: from client discovery to deployment.

PROFESSIONAL EXPERIENCE

Backend Software Engineer (Full Stack contributions) | *A2SV (Africa to Silicon Valley)*

Full-time · Kigali, Rwanda Jan 2026 – Present

- Design and ship scalable backend services and RESTful APIs powering production applications used across multiple regions, with an emphasis on low-latency request handling under high traffic.
- Architect and optimize PostgreSQL data models and queries, applying indexing and query-tuning strategies that measurably improve response times for hot read paths.
- Collaborate with distributed engineering teams across time zones - contributing to technical design discussions, architectural decisions, and Agile sprint planning.
- Implement comprehensive automated testing (unit and integration) and maintain CI/CD pipelines to keep deployments fast, repeatable, and safe.
- Lead code reviews and mentor junior engineers, raising the bar on code quality and engineering standards across the team.

Full Stack Software Engineer | *Smart Class Rwanda*

Full-time · Remote Nov 2024 – Oct 2025

- Designed, built, and maintained end-to-end full-stack applications using React, TypeScript, Python (Django), and PostgreSQL - owning features from spec to production for clients in e-learning and education.
- Led frontend architecture decisions and built a reusable component library that enforced UI consistency across multiple client-facing dashboards, accelerating delivery on subsequent projects.
- Set up and maintained CI/CD pipelines with GitHub Actions and shipped containerized deployments to Digital Ocean using Docker and Docker Compose, cutting deployment time and reducing release-day incidents.
- Translated complex business requirements into technical specifications, managing client relationships from discovery through delivery in a fully remote, distributed setup.
- Partnered closely with UI/UX designers, product managers, and QA to deliver polished software on tight deadlines.

Software Developer (Full Stack) | *Imperium Ltd.*

Full-time · Hybrid · Kigali, Rwanda Jul 2022 – Aug 2023

- Built interactive React frontends and robust REST APIs consumed by multiple client-facing web applications, delivering full-stack solutions across several industries in parallel.
- Conducted code reviews enforcing coding standards, surfacing performance bottlenecks, and improving codebase consistency across the team.

- Adapted quickly across simultaneous client projects, sharpening Agile practices and cross-functional collaboration with designers, PMs, and QA.

Backend Developer Intern (Team Lead) | Solvit Africa

Internship · On-site · Kigali, Rwanda Feb 2023 – Jun 2023

- Served as team lead - coordinating the development team, distributing tasks, and ensuring on-time milestone delivery.
- Built RESTful APIs in Node.js and Express, implementing authentication, validation, and error-handling patterns that became team standards.
- Ran code reviews to maintain quality and consistency, and partnered with the frontend team for clean API integration end-to-end.

SELECTED PROJECTS

Fimboo — Inventory Management System — React · Node.js · TypeScript · PostgreSQL · WebSockets

- Built a full-stack inventory platform with real-time stock-level updates and notifications powered by WebSockets.
- Designed CRUD APIs for product and order management with optimized PostgreSQL queries for fast retrieval at scale.

Skill Synchronization — AI-Powered Internship Platform — React · TypeScript · Django · PostgreSQL

- Led development of an AI-powered platform connecting students with internships at top Rwandan companies.
- Drove project architecture, task allocation, and delivery timelines while mentoring a small team of developers.
- Worked directly with partner companies to translate hiring needs into a real-world product.

Keza E-Shop — E-Commerce Platform — React Native · NestJS · PostgreSQL

- Built a scalable NestJS + PostgreSQL backend for product listings, orders, and authentication.
- Integrated payment gateway flows and exposed clean REST APIs consumed by the React Native client.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go (growing)

Frontend: React.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Webpack, Vite

Backend: Node.js, Express.js, NestJS, Django, REST APIs, WebSockets

Databases & ORMs: PostgreSQL, MySQL, MongoDB, Sequelize, Prisma, Mongoose

DevOps & Tooling: Docker, Docker Compose, GitHub Actions (CI/CD), Git, Digital Ocean, Swagger / OpenAPI

Testing: Jest, Supertest, Unit & Integration Testing

Practices: Agile/Scrum, Code Reviews, Mentorship, Distributed Remote Collaboration

EDUCATION

B.Sc. in Computer Science — University of Rwanda 2019 – 2024

PROFESSIONAL DEVELOPMENT

- Distributed Systems & Microservices: event-driven architectures, message queues, and service-mesh communication patterns.
- System Design & Scalability: horizontal scaling, sharding, caching (Redis), load balancing, and CAP-theorem trade-offs.
- Cloud & Container Orchestration: hands-on with Kubernetes, Terraform IaC, and observability (logging, metrics, tracing).
